tions was introduced in the United Kingdom. The Occupational Classification (SOC90), was developed by the departments and agencies responsible for the collection and processing of occupational data. It has been used for many different functions, for example, to monitor labour market trends, SOC90 has become the

main tool for these purposes. It informs the job matching functions and provides career information for leavers from the education system and, via statistical analysis of trends, informs labour market policies – especially those which relate to training. While there are substantial benefits to be gained from the use of SOC90 for these purposes, these gains are being eroded. The classification is kept up-to-date. As the pace of change in the work becomes differently organised, so the current SOC90 now appears out-of-date. Some parts of the classification, whilst other parts of the classification are out of date.

SOC90 was introduced. A decision was made by the Government in 1990, that new job titles would be positioned in the structure of the classification would be reviewed in 2001. In 1995 a revised index to SOC90 was introduced to speed the review process by revising the structure of

the classification remains unchanged. Jobs are classified in terms of their skill level in the context of the classification, ‘skill’ is defined in terms of the qualifications, training and work experience required to perform the associated tasks in a particular job. The classification is divided into areas where changes in the work performed have been most apparent. These include information technologies, culture, media, sports and leisure. These areas have also been subject to extensive scrutiny and to a degree of change to which the United Kingdom was found to be well ahead of other countries in this area of classification. The classification has been revised thoroughly.

The classification originally rested with the Central Statistical Office, although the Office of Population Censuses and Surveys. Following the transfer of the classification passed to the Office for National Statistics.

other developments. In 1992 the Statistical (stat) commenced a programme of work to ons across the European Union. This was ifications to an agreed implementation of the as ISCO 88(COM). Subsequently, countries on Census data to Eurostat classified to this e data showed that, for the UK, there appeared category termed *Corporate managers* (Elias, tions and enterprises with 10 employees or average percentage of its workforce classified upational structure between EU countries is dicative of a significant classification problem.

rose from the *Review of Social Classifications*. In the UK for a long period, but had developed later. Starting in 1997, and undertaken as a joint project of the Social Research Council and the Office for National Statistics, the project provided a conceptual basis for social classification and a programme leading to the development of a new set of SOC90 as its main ‘building blocks’³. Explicitly in this classification⁴, the associated number of issues that could be addressed in its

revision, an interdepartmental body was formed to consider recommendations regarding the nature of the revision. There was a clear indication of a need to update the Social Research Institute (IER) at the University of Warwick, in order to undertake the work required for revision - a revision in preparation for the Census of Population in 2001 and to regulate the scale of the revision of SOC90. It was seen to retain as much continuity with SOC90 as possible. SOC90 and the rapid changes in the structure of the classification would create some discontinuity, but the requirement that the conceptual basis of the classification should not be altered. A decision to improve alignment with the International Standard Classification of Occupations (ISCO) was not due for revision before 2008. Besides the time constraint, a significant constraint on the revision was the limited resources available for the work. Earlier classifications had consumed considerable money⁶. Efficiency gains through access to the new data would offset this comparative reduction in resources

for the operational users in both research/statistical and administrative use; in as consistent a way as possible; and to ensure that the statistics to understand the classificatory principles and the statistics are produced. The manual is

and Socio-economic Groups.

The new Socio-economic Classification will need to be re-based on the 2000.

The *Classification of Occupational Titles (CODOT)*, introduced in 1972 was preceded by a six-year period to develop. SOC2000 had to be completed within two

following sections. Section 3 gives a brief of the notations and conventions according to which SOC is classified. Section 4 gives the position on updating SOC. Section 5 sets out the classification of Minor, Sub-major and Major Groups. Section 6 gives the classification of job tasks which persons classified to the group. Section 7 gives the job titles which are classified to the group.

Section 8 gives an alphabetical index of job titles, giving both the classification and the SOC code to which each is assigned. This is designed for use in the classification of job titles. In some guidance notes are provided on the classification of job titles and on how to locate exactly the classification of the job typically provided by informants. Section 9 gives the classification of Volume 2.

1.1 Introduction

The classification of their economic activity four distinct concepts are measured in standard statistical sources. These are:

1. Whether a person is or is not at some reference time a person in paid employment and those currently looking for employment are classified as economically active and the remainder as economically inactive persons (e.g. most of those wholly unemployed and an occupation at some time in the past).

2. Whether a person's main job at the reference time is in the private or public sector may be determined by reference to the most common principles used in classifying occupations are:

3. Whether a person doing a job to the means of production (e.g. owner/manager versus employee); and, for an employee, to the status of the workplace (e.g. apprentice/trainee, casual worker, etc.). Not all these status distinctions are made in the classification. Differences over time and between different

inctions should be built into the classification

the work done in a particular job contributes. product made or service performed at the ed on. Thus the job of a person who is d industrially to building, if employed by a y a brewing firm. Most occupational groups austrial sectors; but there are some cases of almost entirely with one particular industry. C takes no account of information on industry, s on coding included in Volume 2 of the SOC

of classification

work experience recognised in ed as being normally required tently’.

p/Office of Population

knowledge required for competent, thorough areas of the classification it refers also to the ed with, tools used, etc.).

ime deemed necessary for a person to become sks associated with a job. This, in turn, is a formal qualifications or the required amount aining and qualifications, some tasks require tasks, for competence to be acquired. Within or groups and sub-major groups)⁷ reference

of Occupations (ILO, 1990), SOC90 and SOC2000 utilise four d major groups, sub-major groups, minor groups and unit erically by one, two, three or four digits.

competence associated with a general education, completes his/her compulsory education and school-leaving examination grades. Competent level will also involve knowledge of appropriate equipment and require short periods of work-related training. Occupations at this skill level within the SOC90 include postal workers and mail sorting assistants.

Group 2 consists of occupations, all of which require the completion of secondary education as for occupations at the first skill level. Occupations at this level may require a longer period of work-related training or work experience. Occupations at this level include machine operation, driving, and clerical and secretarial occupations.

Group 3 consists of occupations that normally require a body of knowledge acquired through post-secondary compulsory education but not to degree level. A significant portion of occupations fall into this category, as do a variety of trades and technical occupations and businesses. In the latter case, educational attainment may be less than a lengthy period of vocational training may not be required for competent performance of tasks, but a significant period of training is required.

Group 4 consists of occupations that are termed 'professional' occupations and occupations in the public sector, enterprises or national/local government. Occupations in this group require a degree or equivalent period of relevant education and training.

The SOC2000 and compares these with SOC90. As can be seen from the table, within skill groups, the skill specialisation criterion has been used to further subdivide occupations within each skill level. Thus, for example, Group 3 is divided into science and technology professionals and skilled trades, and Group 4 is divided into construction and building trades.

in the order which best approximates their equivalent
 over that there is no exact correspondence at this level.

is apparent from Table 1. First, it can be seen that SOC2000 is incorporated within the codes used to define the major and the sub-major groups of the SOC2000. This was not the case with SOC90. For this reason, the code structure of SOC2000, as opposed to the sub-major group structure of SOC2000 now in use, is a major group classification. This has been achieved by reclassifying the major group structure according to the

from users of SOC90, as well as from the work of the *International Labour Office* and the harmonisation activities of SOC2000 was focused in a number

of ways. First, it was affected in some way by the rapid progress in technologies, at the forefront of these are the jobs of the future. The implementation of such technologies. It seemed to be a process that needed to be thoroughly

of the need of reform. The apparent inconsistency between theory and practice in other EU countries. However, other strands of research evidence on the structure of management structures in organisations. The title ‘manager’ in jobs which should not

ns

led to an increasing demand for environmental protection. It did not recognise many specific occupations and their structure. During consultations undertaken in 1990, users had expressed particular concern over

manufacturing processes

change in occupations that are associated with the manufacturing process. The continued development of

in manager’ for the job known earlier as ‘senior conductor’.

away from mass production to small batch, stimulated the demand for technically qualified rapid re-tooling and other adjustments to the widespread use of computerised production and the need for workers to hold the specialised skills.

moves towards a more 'self-service' approach, of competitively-priced alternative goods and for and supply of after-sales service, quality 'loyalty' schemes to attract and maintain customers have given rise to a new set of occupations at the interface between the producers or distributors and consumers.

Communication technologies has facilitated the use of services outside 'normal' business hours and has enabled the provision from remote call centres. Part of this has been to latent demand and some may be a function of population ageing. The latter trend may have resulted in a new role for the household member to: shop, pay bills, or receive services such as electricity, gas, water, etc. during 'normal' business hours. The rapid growth in this area combined with the need for specific occupational skills in this area of work.

Information on the content of occupations and the work content of jobs was used for the revision of SOC90. By far the most recent source of information was the 1991 Census of Population and the Labour Force Survey. Although this is now somewhat dated, its information was operationalised and gave useful information on the content of jobs from census form-fillers.

The 1991 Census of Population was a 1/2% sample of the population. The text response to questions on occupation, was extracted from approximately 115 thousand jobs in the database. Similar information was extracted from approximately 63 thousand jobs and consisting of details of the job and qualifications required for the job. Occupational descriptions were obtained via the database of 291 thousand detailed descriptions of

to ensure that its interests in occupational classification were adequately reflected in the new classification. The team decided to undertake a programme of research that would inform the revision of SOC90. This took the form of a review of the evidence gathered by SOC90 in this process. Through a selection of relevant information from a survey of employers, information was gained about the requirements for the new classification to be reflected in the revision process.

The team was also helpful in investigating processes of skill change and the impact of these were:

• The development of a cyclopaedia of statistical information structured according to SOC90 (McKnight and Elias, 1997);

• The collection of an eight year period from agencies using the new classification;

• The collection of detailed descriptions of a wide variety of occupations, including advertising for job vacancies, careers guidance and training materials;

• The collection of views, including trades unions, trade associations, employers' organisations and government departments;

• The detailed scrutiny of SOC90 unit groups by the team to ensure consistency for the UK.

The team also worked on about the problem areas of the SOC and the relationship between the construction of new occupational classification and the existing SOC90.

Some of the major changes that distinguish the new classification from SOC90 are:

(a)

• The change from *managers and administrators* to *managers and administrators* (a division that has been made to this major group. This includes clerical work (e.g. administrative assistant) and other support work).

• The change from *quality and customer care managers*, and *quality and customer care managers* to *quality and customer care managers*, and a new unit group exists for *natural environment and recreation services*, new unit groups for *hospitality and leisure services*, new unit groups for *quality and customer care managers*, and *quality and customer care managers*.

Research chemist

2112 BIOLOGICAL SCIENTISTS AND BIOCHEMISTS

Biological scientists and biochemists examine and investigate the morphology, structure, chemistry and

2113 PHYSICISTS, GEOLOGISTS AND METEOROLOGISTS

Physicists, geologists and meteorologists study relationships between matter, energy and other physical phenomena, the nature, composition and structure of the Earth and other planetary bodies and forecast weather conditions and electrical, magnetic, seismic and thermal activity.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

Entrants usually possess a degree, although entry may also be possible with an appropriate BTEC/SQA award. Further specialist training is provided on the job. Higher degrees and professional qualifications are available.

TASKS

- conducts experiments and tests and uses mathematical models and theories to investigate the structure and properties of matter, transformations and propagations of energy, the behaviour of macro-molecules and living cells and their interaction with various forms of energy;
- uses surveys, seismology and other methods to determine the earth's mantle, crust, rock structure and type, and to analyse and predict the occurrence of seismological activity;
- observes, records and collates data on atmospheric conditions from weather stations, satellites, and observation vessels to plot and forecast weather conditions;
- applies mathematical models and techniques to assist in the solution of scientific problems in industry and commerce and seeks out new applications of mathematical analysis.

4

**8113 TEXTILE PROCESS
OPERATIVES**

Workers in this unit group operate machines to prepare natural and synthetic fibres for processing, spin and twist fibre into yarn, thread, twine, rope and other similar material, and estimate the quantities of colouring matter required for printing and dyeing fabrics.

5

6

**TYPICAL ENTRY ROUTS AND
ASSOCIATED QUALIFICATIONS**

There are no formal academic entry requirements. Training is typically provided on-the-job. NVQs/ SVQs in Manufacturing Textiles are available at Levels 1, 2 and 3.

7

TASKS

- sets controls, starts machinery and monitors the passage of material processed;

8

9

TASKS

- loads prescribed quantities of ingredients into plant equipment, starts operational cycle, monitors instruments and gauges indicating conditions affecting the operation of the plant and adjusts controls as necessary;
- prepares dye, bleaching, water repellent, fixing salt and other chemical solutions to finish and treat textiles;
- regulates input of polymer into melting unit, extrudes polymer, gathers extruded filaments and feeds strands through rolling, cutting and treatment units to produce synthetic fibre;
- operates kilns, furnaces and ovens to produce charcoal, coke and other carbon products;
- operates machines to coat film and tape with sensitising material and otherwise impregnate materials by immersion, split and mould mica and produce asbestos pipes and sheets;
- cuts and trims skins, hides and pelts, removes wool, hair, flesh and other waste material, and washes, limes, tans, dyes and otherwise treats hides for making into leather, skin and fur products;
- withdraws samples for quality control testing, removes and regulates discharge of batch material upon completion of processing.

Paint maker

Process worker (*chemical mfr*)

8115 RUBBER PROCESS OPERATIVES

Workers in this unit group attend and operate masticating, calendering, mixing, forming, shaping, moulding, extruding, cutting, trimming and winding machines to make and repair rubber products.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements. Training is typically provided on-the-job, supplemented by specialised courses. NVQs/SVQs in Plastic Processing Operations are available at Levels 1 and 2. Modern Apprenticeships in Polymer Processing leading to an NVQ/SVQ at Level 3 are available.

TASKS

- prepares machine for operation by affixing any necessary attachments;
- weighs and mixes ingredients, loads machine with plastic to be worked or regulates flow from feed conveyor or hopper;
- monitors controls regulating temperature, pressure, etc. and operates moulding, extruding, calendering, thermoforming and covering machines;
- inspects plastic products for defects, takes measurements and repairs plastic belting and sheathing;
- trims, cuts and performs other finishing operations on plastic using hand and machine tools;
- makes artificial eyes and contact lens discs, and makes and repairs spectacle frames and plastic parts of artificial limbs and other orthopaedic appliances.

8118 ELECTROPLATERS

Electroplaters operate continuous plant to coat metal parts and articles electrolytically, form metal articles by electro- and vacuum-deposition, dip and spray articles with another metal, plastic powder or other material and treat articles chemically to produce desired surface finishes.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements. Training is typically provided on-the-job. NVQs/SVQs in Product Coating are available at Levels 2 and 3.

TASKS

- cleans and rinses article or preshaped former to be coated;
- masks area not to be covered with wax, resistant adhesive tape or other material;
- fits appropriate nozzle on spray gun, loads spray gun with appropriate coating material and prepares electrolytic solutions;
- sets machine, plant, or equipment controls to regulate electric current and temperature of molten zinc, tin, chromium, copper or other non-ferrous metal;
- immerses articles in plating solutions or sprays article until required thickness of coating has been deposited;
- removes article from solution and centrifuges, if necessary, to remove excess molten metal before cooling.

8125 METAL WORKING MACHINE OPERATIVES

Metal working machine operatives operate machines to cut, shape, abrade and otherwise machine metal, use hand and power tools to remove surplus metal and rough surfaces from castings, forgings or other metal parts, and clean, smooth and polish metal workpieces.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements. Training is typically received on-the-job. NVQs/SVQs in Engineering Machining are available at Level 1.

TASKS

- secures workpiece in drilling, boring, milling, planing, grinding, lapping, honing, electrochemical, or other shaping machines, or loads metal stock on to press;
- sets controls, starts machine and operates controls to feed tool to workpiece or vice versa and repositions workpiece during machining as required;
- withdraws workpiece and examines accuracy using measuring instruments;
- operates burning, chipping and grinding equipment to remove defects from metal parts, and files, chisels, burns and saws off surplus metal;
- smoothes rough surfaces with hand tools, abrasive belts and wheels, compressed air, jets of vapour, or blasting with shot, grit, sand or other abrasive material;
- selects and secures polishing head to machine tool, prepares head with emery, grease or other substance, sets speed and angle of polishing head, and operates controls to feed polishing head to workpiece or vice versa.

- digs trench and assists pipelayers to lay, renew or repair sewerage pipes.

RELATED JOB TITLES

Filter attendant (*water works*)

Wireman/woman

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements, although some employers require candidates to possess GCSEs/S grades. Training is typically received on-the-job, supplemented by training courses where instruction in specific techniques is required. Various NVQs/SVQs encompass aspects of quality control.

TASKS

- examines articles for surface flaws such as cracks, dents, defective sealing or broken wires by visual inspection or using aids such as microscopes or magnifying glasses;
- checks sequence of assembly operations and checks assemblies and sub-assemblies against parts lists to detect missing items;
- sets up test equipment, connects items/system to power source/pressure outlet, etc. and operates controls to check performance and operation of electrical plant and machinery and electronics systems;
- examines yarn packages, textile fabrics and garments, wood or wood products, paper and paperboard, plastics and rubber materials, food products, food storage containers, etc., checks specifications, marks any repairable defects and rejects faulty items;
- reports any recurrent or major defects and recommends improvements to production methods.

RELATED JOB TITLES

Delivery driver

Van driver

8213 BUS AND COACH DRIVERS

Bus and coach drivers drive road passenger-carrying vehicles such as buses, coaches, trams and mini-buses.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements, though candidates must be in possession of a full car driving licence. All bus and coach drivers must pass the Passenger Carrying Vehicle (PCV) test. This incorporates a theoretical examination and assessed driving. Entrants to the PCV test must be at least 18 years old. NVQs/SVQs in Transporting Passengers by Road are available at Levels 2 and 3.

TASKS

- checks tyres, brakes, lights, oil, water and fuel levels and general condition of the vehicle before start of journey;
- drives single- and double-decked vehicle over pre-determined route, complying with traffic regulations and keeping to time schedule;
- stops and opens and closes doors at pre-arranged places to allow passengers to board and alight, observing regulations concerning the number of passengers carried;
- may collect fares from passengers and issue tickets or ensure that they use a ticket machine;
- may plan routes in conjunction with private hirer and assist with loading and unloading of luggage;

8215 DRIVING INSTRUCTORS

Driving instructors co-ordinate and undertake the instruction of people learning to drive cars, motorcycles, buses and haulage vehicles.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic requirements. Candidates must have held a current driving licence for four out of the last six years, have no motoring or criminal convictions and be over 21 years old. To gain registration as an Approved Driving Instructor, entrants must pass a three-part examination. Instructors for Large Goods Vehicles (LGVs) and Passenger Carrying Vehicles (PCVs) are trained internally or at specialist training establishments. NVQs/SVQs in Driving Instruction at Level 3 are available for instructors in all licence categories.

TASKS

- checks instruction and learning standards and discusses teaching plans with other instructors;
- plans lessons in accordance with the needs and abilities of individual pupils;
- explains driving techniques and assists pupil with difficulties;
- familiarises pupil with the Highway Code and different road and traffic conditions;
- advises pupil when to apply for theoretical and practical driving tests and familiarises them with test procedures and standards.

8217 SEAFARERS (MERCHANT NAVY); BARGE, LIGHTER AND BOAT OPERATIVES

Workers in this unit group supervise and carry out a variety of deck duties and operate and maintain engines, boilers and mechanical equipment on board ships.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements, although some employers may expect entrants to possess GCSEs/S grades. Candidates are expected to pass a medical examination and have good eyesight. Training takes place at nautical college and lasts between 11-13 weeks.

TASKS

- ensures that necessary fuel supplies are on board and inspects engine, boilers and other mechanisms for correct functioning;
- removes and repairs or replaces damaged or worn parts of plant and machinery and ensures that engine and plant machinery are well lubricated;
- stows cargo, assists passengers to embark and disembark, watches for hazards and moors or casts off mooring ropes as required;
- steers ship, under the supervision of a duty officer, checks navigational aids and keeps bridge, wheel and chartroom clean and tidy;
- performs other deck duties, including servicing and maintaining deck gear and rigging, splicing wire and fibre ropes, greasing winches and derricks, opening up and battening down hatches, securing gangways and ladders and lowering and raising lifeboats.

8219 TRANSPORT OPERATIVES NEC

Workers in this unit group monitor the activities of bus drivers, conductors and other road transport depot drivers, undertake various tasks related to water transportation, and perform other transportation tasks not elsewhere classified.

TYPICAL ENTRY ROUTES AND ASSOCIATED QUALIFICATIONS

There are no formal academic entry requirements. Training is provided both off- and on-the-job. NVQs/SVQs in Organising Road Transport Operations and Marine Operations are available at Level 2.

TASKS

- checks that vehicles run as scheduled, monitors number of passengers travelling particular routes and makes recommendations for improvement of services;
- organises relief and replacement crews as necessary, ensures compliance with regulations regarding the carrying of passenger and luggage, and submits reports of any irregularities;
- checks that goods have been correctly loaded into vehicle, monitors and records information from tachographs, and arranges for servicing, refuelling, cleaning and repair of depot vehicles;
- operates lighthouses and locks, opens and closes moving bridge across inland waterways and docks, maintains navigational lights in harbours, assists in mooring craft, and measures depth of water in canals, rivers, etc. to determine possible dumping or dredging sites;
- guides horses or ponies and drives horse drawn vehicles to transport goods and passengers.
